

CYBERSECURITY PROJECT REPORT

Course: Host-Based Security

Student Name: Okirie Chukwumeniem Faith

Group: 3

Institution: NIIT

Date: 13th October 2025

ASSIGNMENT 1: Entering the BIOS

Objective:

To access and view the system BIOS setup utility.

Steps Performed:

1. Restarted the computer.
2. Pressed the BIOS key (F2 for Dell / F10 for HP).
3. Opened BIOS settings and viewed system information.
4. Exited without saving any changes.

Result:

Successfully entered BIOS setup.

Screenshot: (Insert photo of BIOS screen here)

ASSIGNMENT 2: Creating a New Partition

Objective:

To create a new storage partition using Disk Management.

Steps Performed:

1. Opened Disk Management (right clicked Windows start → Disk Management).
2. Right-clicked the C: drive → Shrink Volume.
3. Created new partition named Cybersecurity (D:).
4. (Bonus) Mounted the new partition in an empty NTFS folder.

Result:

New partition successfully created and visible in File Explorer.

Bonus Screenshot: (Mounted folder with drive icon)

ASSIGNMENT 3: Users and Groups Permissions

Objective:

To create and manage user accounts and groups in Windows.

Steps Performed:

1. Opened Computer Management → Local Users and Groups.
2. Created users: Student01, Student02, Staff01, Staff02.
3. Created groups: Students and Staff, and added users.
4. Checked user privileges (non-admin users can't create accounts).

Result:

Users and groups created successfully with limited permissions.

Screenshots: (User list + Group list)

ASSIGNMENT 4: Using Speccy

Objective:

To analyze the system's storage details and health using Speccy software.

Property

Result

Manufacturer

SAMSUNG

Model

MZVL8512HFLU-00BH1

Capacity

476 GB

Type

SSD

S.M.A.R.T. Status

Not supported

SATA/NVMe Type NVME

Optical Drive NONE

Screenshot: (Speccy Storage section)

ASSIGNMENT 5: Command Prompt (CLI Operations)

Objective:

To create and manage directories and files using the Command Line Interface.

Steps Performed:

1. Created folder CLI on Desktop.
2. Added subfolders: Courses, Documents, Certifications.
3. Inside Courses, created course folders: ELCP, BITS, CHHS.
4. Added text files in each folder (Assignment.txt, Task.txt, Notes.txt).
5. Copied Courses folder into Backup using:
xcopy Courses Backup /E /I
6. Displayed folder structure using:
tree command
7. Saved output to text file: YourName-Output.txt.

Result:

All folders and files created successfully.

PROJECT SUMMARY

In this Host-Based Security practical, I learned:

- How to access BIOS safely.
- How to manage partitions and user accounts.
- How to check hardware info using Speccy.
- How to use Command Prompt for file system control.

This project improved my technical and system administration skills.
