

CYBERSECURITY PROJECT REPORT

Course: Virtualization

Student Name: Okirie Chukwumeniem Faith

Group: 3

Institution: NIIT

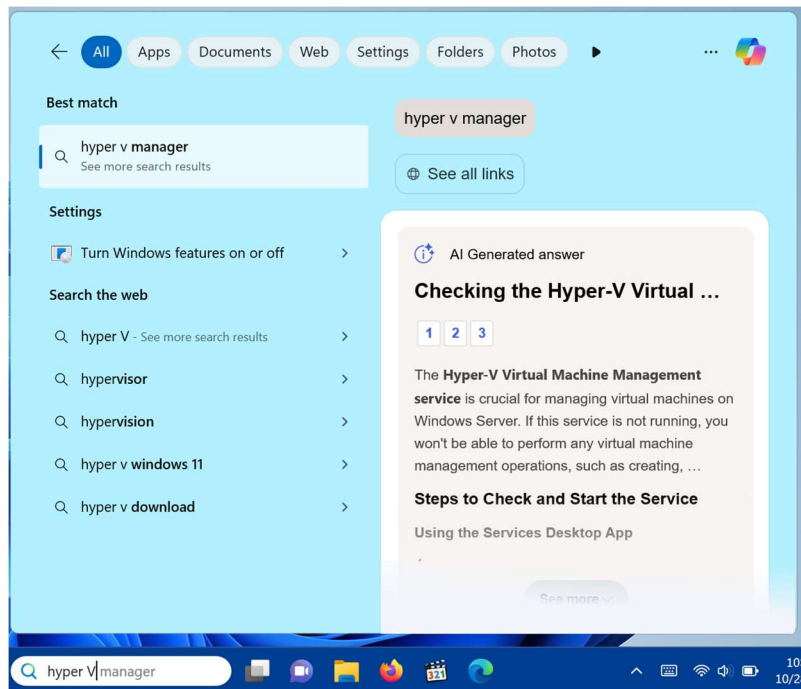

Date: 13th October 2025

Assignment 1 - Enabling Hyper-V and Installing VirtualBox

Completion Requirement: Submit screenshot of Hyper-V Manager and VirtualBox Manager windows

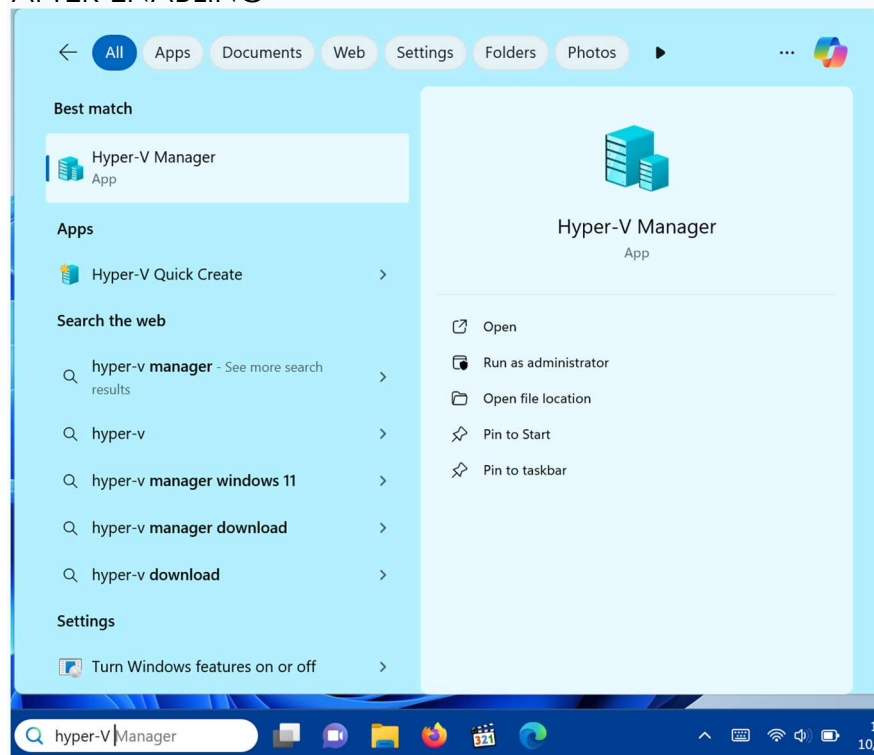

Part 1: Hyper-V Manager

1. Enable Hyper-V in Windows (reboot required)
 - A. Go to Control Panel > Programs > Programs and Features
 - B. Click "Turn Windows features on or off"
 - C. Check Hyper-V and click OK
 - D. Reboot computer after installation is complete
2. Open Hyper-V Manager

BEFORE ENABLING

AFTER ENABLING

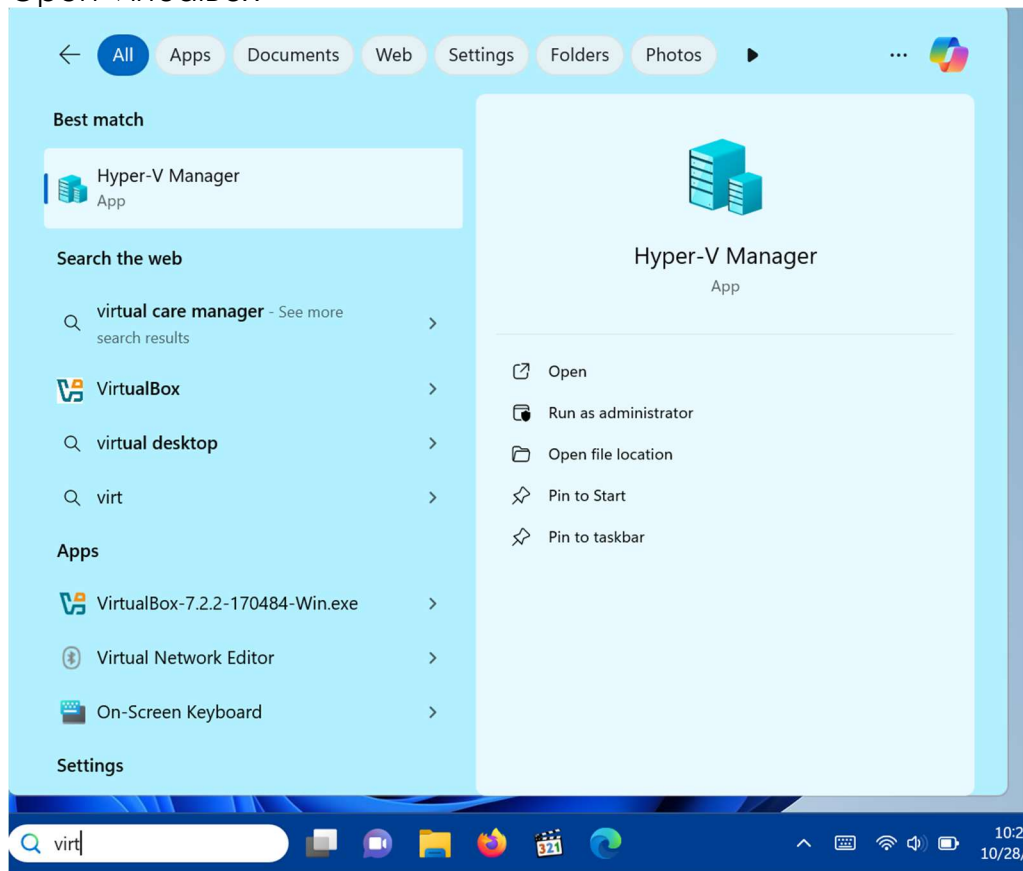

Part 2: Install VirtualBox

1. To download VirtualBox, go to the official site [virtualbox.org](https://www.virtualbox.org) and download the latest version for windows, and follow this installation process.

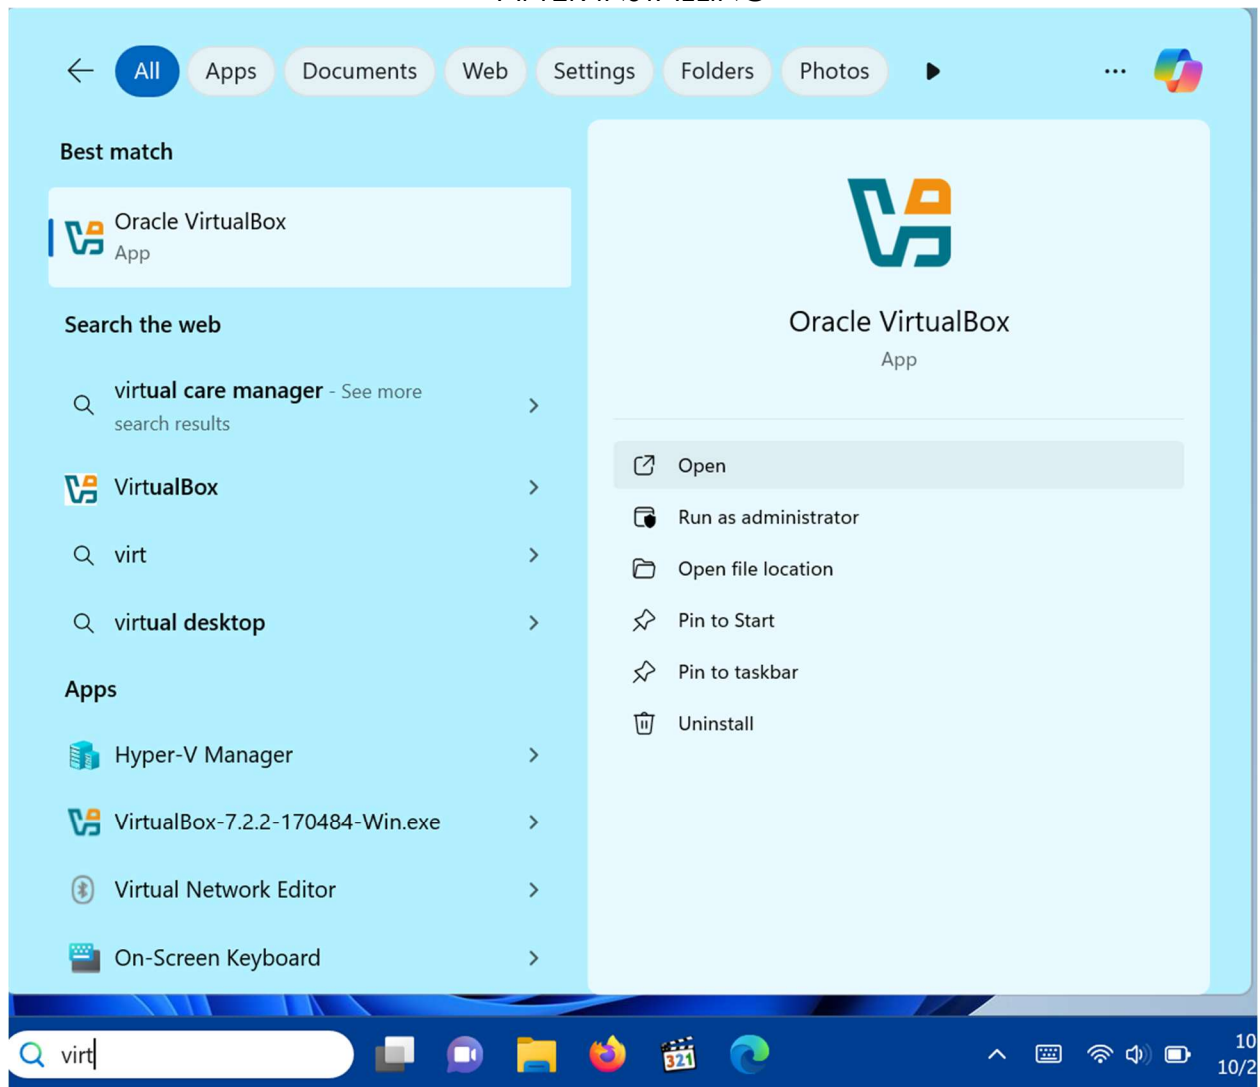

1. Getting Started > Next
2. Select Installation Location > Next
3. Creating Entries and Shortcuts > Next
4. Ready to Install > Install
5. Finished Installation > Finish

Open VirtualBox

BEFORE INSTALLING

AFTER INSTALLING

Assignment 2 - Install a Windows 10 Guest VM

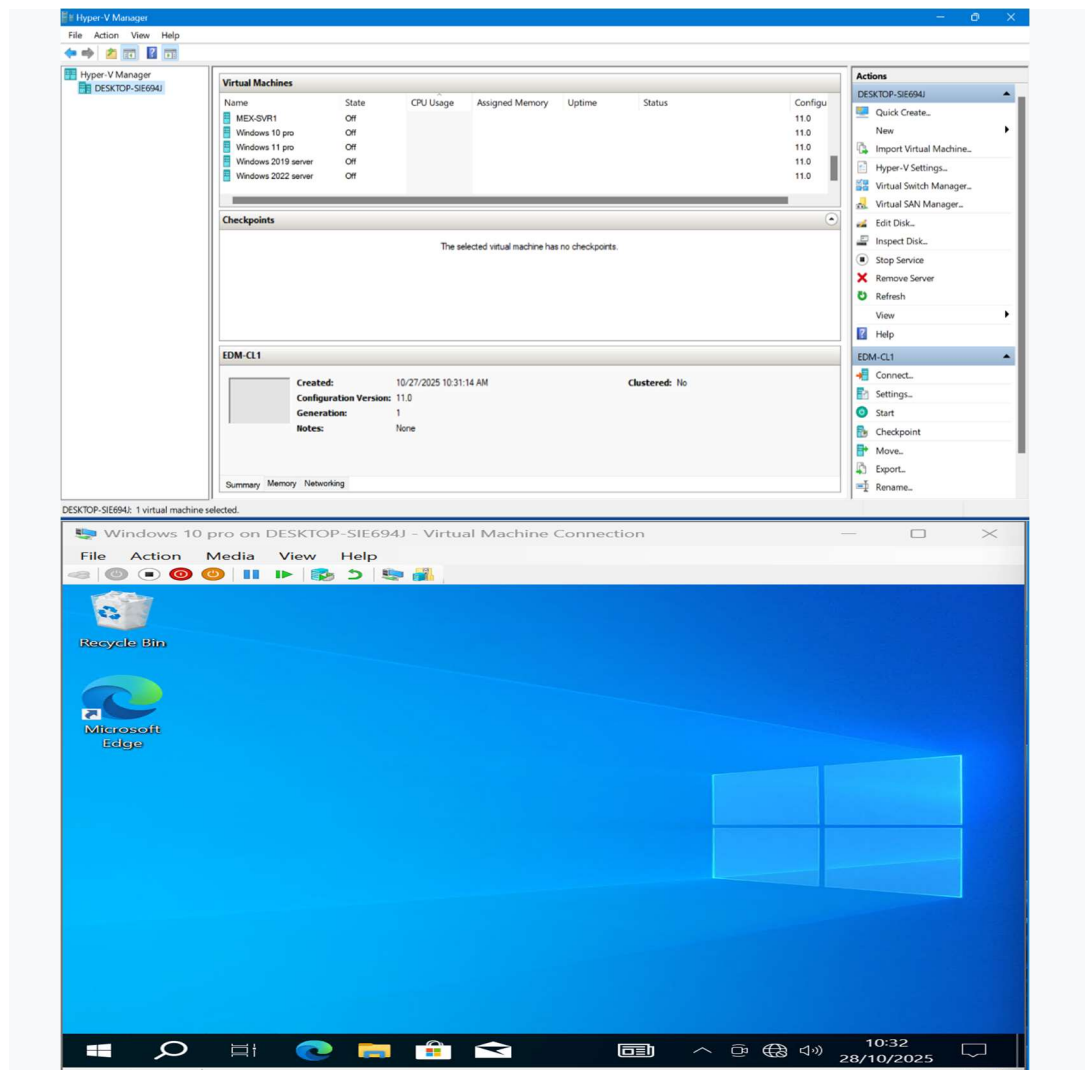

Completion Requirement: Submit screenshot of your Virtual Machine window and your Hyper-V Manager window

Install a Windows 10 Virtual Machine

Instructions:

1. Start Hyper-V
2. Click New (Right side of screen, in the Actions menu)
3. Select "Virtual Machine" to open the New Virtual Machine Wizard:
 - A. Before You Begin: read page and click next

- B.** Specify Name and Location: Name your new VM (you can change the location - make sure you have a lot of room on the volume) and click Next
 - C.** Specify Generation: Select "Generation 2" because our laptops are the newer UEFI systems, with a 64bit OS (Gen 1 for linux) and click Next
 - D.** Assign Memory: Change startup memory to 4096 MB (this establishes how much RAM the VM has) and click Next
 - E.** Enable Trusted Platform Module for Gen 2 VMs.
 - F.** Configure Networking: Keep default "Not Connected" and click Next
 - G.** Connect Virtual Hard Disk: Change Size to 40 GB (this establishes how much Hard Drive space the VM has) and click Next
 - H.** Installation Options: Select "Install an operating system from a bootable image file" and click Browse
 - Browse to your ISO files and select your Windows 11 ISO and click Open (or double-click it) and click Next
 - I.** Completing the Virtual Machine Wizard: read and click Finish
 - Now you have a new VM listed in the main Virtual Machines window, it is waiting to be turned on and to have Windows 11 installed.
- 4.** Double-click your new VM to open the VM window
- Click the Start button in the center of the VM window
 - Be prepared to hit the space bar (or any key) to start the installation. Watch the screen for instructions, they may be quick.
 - Follow the instructions for the OS installation.
 - Practice this a lot. We should install an OS everyday. (yes, you'll have to delete what you create to have room to do it everyday)

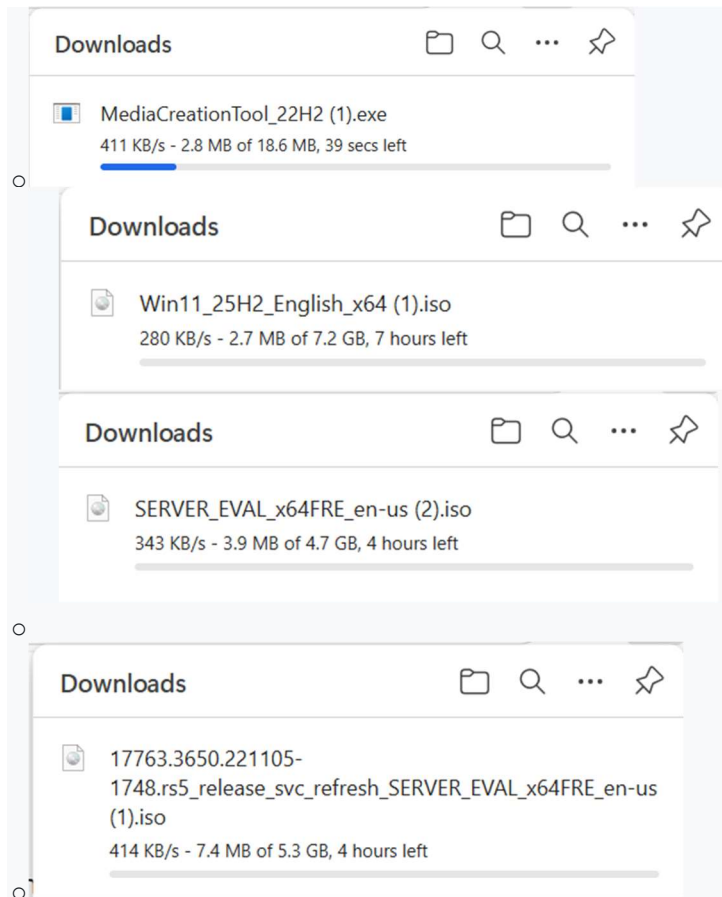

Assignment 3 - ISO Hunting

Completion Requirement: Submit screenshot of File Explorer showing ISOs

Note: Keep the ISOs, you will need them later in the course

Download some Windows ISO files

1. Download Windows ISOs
 - Try to find Windows 10 on Microsoft's website
 - Use the [Microsoft software download center](#) to download Windows 10 and 11 ISOs.
 - Download Windows Server 2022 and 2019 ISOs
 - NOTE: they are legitimate copies and a valid license is needed to activate after the evaluation period
 -

2. Download Linux ISOs

- Ubuntu's most recent version
- Kali's most recent version
- Rocky
- Fedora
- Parrot
